

iPhone/iPod Touch Exchange Mail Configuration

The iPhone uses an implementation of the ActiveSync protocol. To sync your iPhone with your University email (Exchange) account, follow these steps:

Tap **Settings**, then **Mail, Contacts, Calendars**

Tap **Add Account**, then select **Microsoft Exchange** as the account type

Type in your University email address

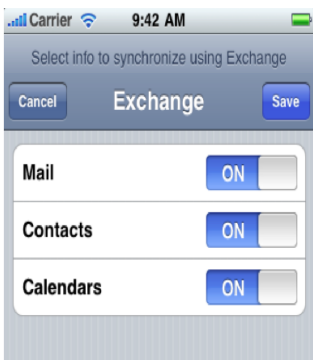

Enter worc as the domain

Enter your network username and password

The **Description** field allows you to enter a name for the account (ie work or UW mail)

Tap next and you will be presented with a **Server** option
Enter **webmail.worc.ac.uk** in the **Server** field

Tap next and you will see the screen to the left which allows you to select your sync options

If you have any problems connecting go back into **Settings**, then **Mail, Contacts, Calendars**. In your Exchange account settings tap **Account Info** and make sure that Use SSL is 'On'

By default the phone will sync 3 days worth of email. To change this go into **Settings**, then **Mail, Contacts, Calendars**, select your Exchange account and tap Mail days to sync

In the account options you can also configure push and timed sync options. If you want to conserve battery life use timed sync rather than push
