

STUDENTS  
ORGANISING FOR  
SUSTAINABILITY  
UNITED KINGDOM

## Sustainability Skills Survey 2020-21

This report gives the results for 8450 respondents.

A filter of 'If you study at a university or a college, what is the na...=University of Worcester' has been applied to the data.

The following charts are restricted to the top 20 codes. Lists are restricted to the most recent 100 rows.

Which of these best describes the type of course you are currently taking?

**Please select one only**

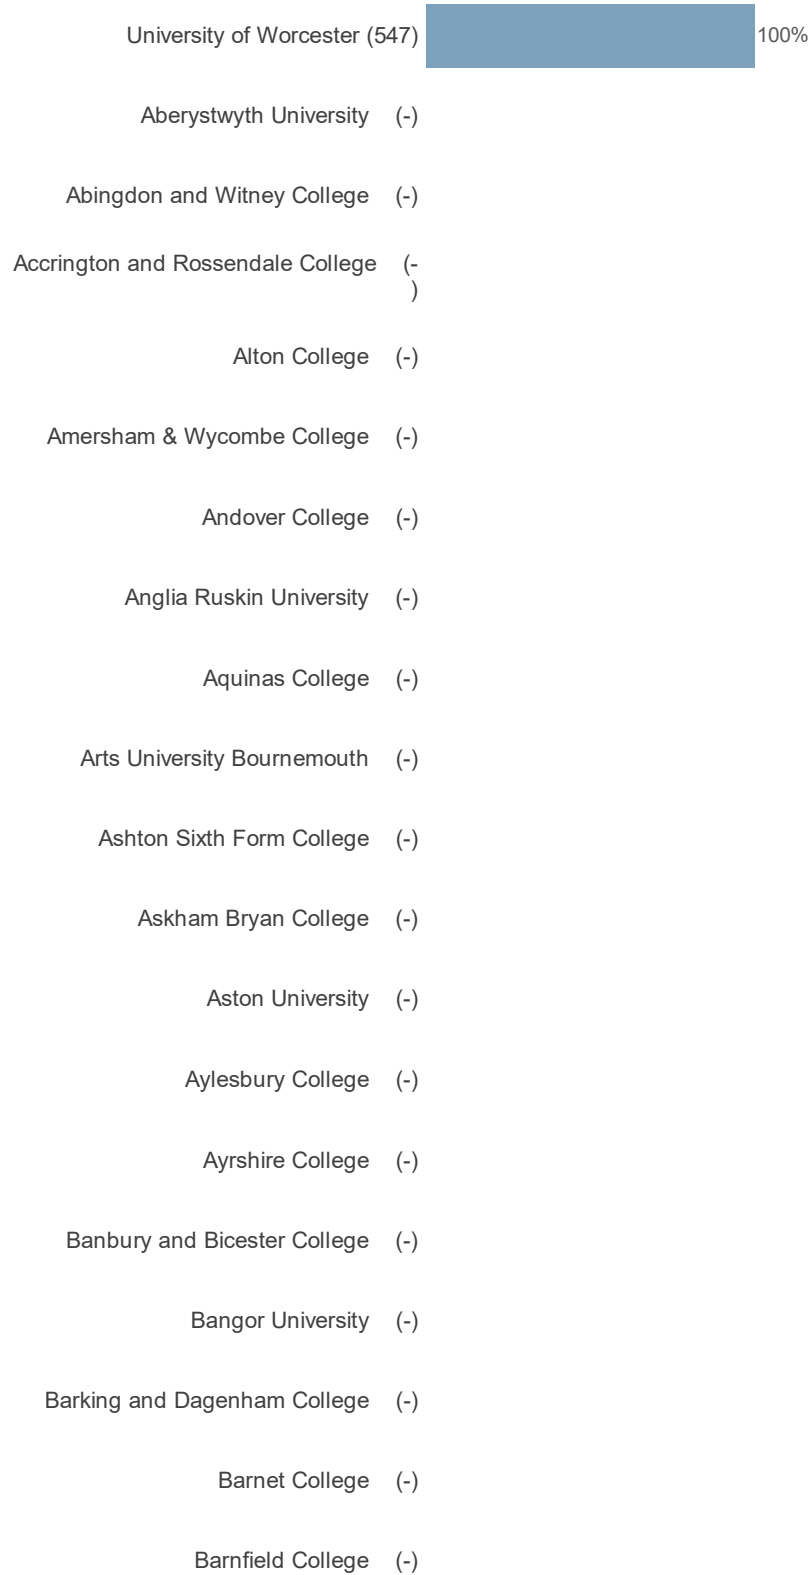

What year of study are you in?

***Please pick one***

If you study at a university or a college, what is the name of your current place of study?

**If you're currently completing an apprenticeship, or are studying with a training provider or other type of education provider (i.e. not a college or university), please write the name of your place of study in the box below.**

NHS Hospital

southwark

Worcestershire Acute Hospitals NHS Trust

university

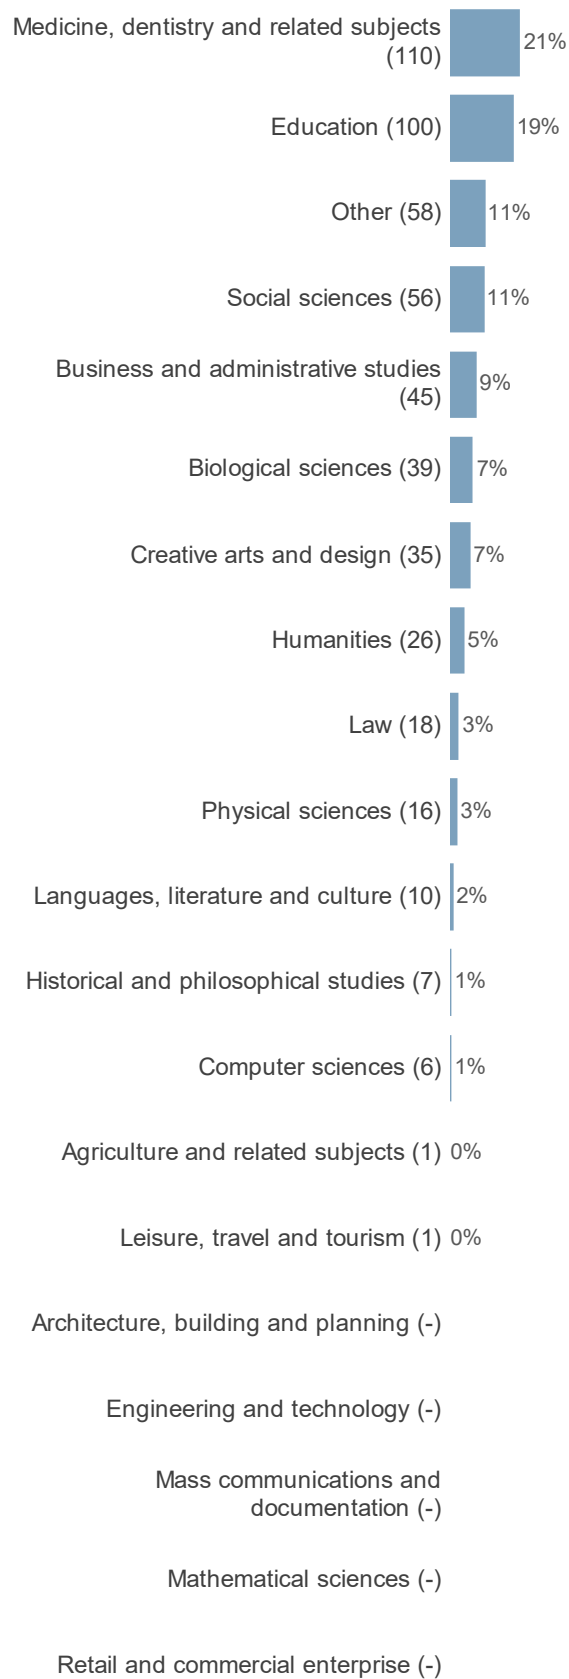

University of Worcester

How many academic years have passed since you last studied prior to attending your current university?

**Select one only**

Which option best describes your course or degree?  
**Select one only**

Which region/country do you work in?

**Please pick one**

Thinking about any 'field trips' that have been available to you through your course/apprenticeship, to what extent do you agree or disagree with the following statements?

***By 'field trip' we mean any visits you've made for your course/apprenticeship to study something away from your usual place of study***

***Please select one answer for each option***

(The cost of participating in 'field trips' is a barrier for me)

Thinking about any 'field trips' that have been available to you through your course/apprenticeship, to what extent do you agree or disagree with the following statements?

*By 'field trip' we mean any visits you've made for your course/apprenticeship to study something away from your usual place of study*

*Please select one answer for each option*

(I face accessibility barriers to taking part in 'field trips')

Thinking about any 'field trips' that have been available to you through your course/apprenticeship, to what extent do you agree or disagree with the following statements?

*By 'field trip' we mean any visits you've made for your course/apprenticeship to study something away from your usual place of study*

*Please select one answer for each option*

(I take into account the environmental impact (e.g. carbon footprint) of a 'field trip' when deciding whether to participate)

Please read the following list of skills, knowledge and attributes carefully.

Thinking of your time at your current place of study or apprenticeship, have any of the following been covered in the teaching so far?

**Select all that apply**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Understanding how human activity is affecting nature)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (The causes of inequality in the world)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Using resources efficiently to limit the impact on the environment and other people)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Considering ethical issues linked to your subject)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Looking at global problems from the perspective of people from around the world)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Challenging the way we do things now (like business, politics, education))**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Looking at a problem using information from different subjects or disciplines)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Solving problems by thinking about whole systems – including different connections and interactions)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Planning for the long term, as well as the short term)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Understanding how to create change)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at your current place of study or apprenticeship?

**Please select one for each option (Communicating complex information clearly and effectively to different types of people)**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Build the material into the existing content in the course )**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Offer a specific module on the course)**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Run voluntary activities within departments )**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Run voluntary activities for all students (e.g. within the students' union))**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Offer placements or work experience)**

Imagine all courses or apprenticeships are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course / apprenticeship would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Link coursework, projects or dissertations to the issues)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

**(Understanding how human activity is affecting nature)**

How important do you think the following skills and knowledge are to your future employers?

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

---

Development that lasts longer

---

Growth that can be maintained

---

To develop a company in a way which does not harm the environment or at least, it harms it in a way that can be easily restored.

---

development in which no risk towards the environment is included

---

developing into the future and making technological advancements too keep up with modern times whilst ensuring that the impact on the environment and into the future is considered and actively worked upon to improve.

---

Developing the economy without negatively impacting natural resources

---

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

It's a growth that meets the requirements of the existing age without strike a balance the capacity of subsequent age groups to meet their own needs.

Sustainable materials, carbon offset, vision for renewable energy and investment in becoming carbon neutral or negative.

I understand sustainable development to mean us limiting the amount of damage we are doing to the environment on a daily basis, by doing things such as lowering our carbon footprint and limiting the amount of rubbish that pollute the oceans through recycling etc. Sustainable development will help our planet to survive, rather than it perishing due to issues such as climate change, and pollution etc.

Sustainable development is enhancing and forwarding businesses, organisations, policies and communities in a manner that is long lasting, durable and benefits the environmental and social world

Developing in a safe way

Development that can easily be maintained

Development without the depletion of natural resources.

The ability to progress and maintain levels of Economic and humanitarian growth, without damaging the potential and resources for future generations

Development that meets needs without a negative impact or long term effect that compromises further development.

continued improvement of the organisation without long term damaging effects of the environment

Economic development or progress with minimal environmental impact

new infrastructure/techniques that doesnt cause an environmental burden

Growth that does not hurt the environment.

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs

It means to work on ways of keeping the same processes that we use, but making them have no or little impact on the resources/environment that they effect.

To improve the qualify of produce in the most long term beneficial way

The progress towards making aspects of our life more considerate of the environment, ensuring its saftey.

Sustainable development is the the ability to reach the needs of the present without compromising the ability of the future generations to meet their own needs

development that helps the present but also the future

It a development that meets present needs without compromising future needs

Yes

without sacrificing limited sources of present how we can transfer it to future generation

Sustainable Development is meeting the needs of the present without compromising or understanding the future.

Being thoughtful of the use of resources in order to be able to use them in future

development thats practical

Never heard of it

Developing something without it affecting other things

Progressing in a way that doesn't damage the planet. Being able to continue operating as such because of its lesser negative impact on the Earth.

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

Development that doesn't harm the environment whilst also being socially and economically beneficial rather than damaging in-order to encourage and enable change.

To avoid unnecessary wastage and to ensure that natural resources are not depleted for further generations

Sustainable development is a type that brings a long lasting innovations into reality

Sustainable development to me is progression either physical or socially that is able to continue without have negative effects on the people and environment surrounding it

Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

a way of progressing in a sustainable way

Change that will last

Development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Meeting current needs without compromising the ability of the future

a development that is realistic (not utopic) and can be achieved as soon as possible

Development that doesn't cause a deficit in resources

ability to use resources without inflicting damage for future generation

its a way of progressing in a learning environment in a teaching method or finding a balance of a method that works for students

Development without adversely affecting the environment.

to develop in a sustainable way

developing the tools and understanding to sustain economic and environmentally

Continuing a similar quality of life through technology that we currently have but through means that do not contribute to Carbon Dioxide, methane and other emissions or by further impeding the defensive systems on the earth currently (i.e trees)

Development which exists in symbiosis with the environment, rather than in spite of.

economical and social improvement without detrimental effect to the environment

Development that lasts a long amount of time without needing change or without it becoming a detriment.

When adapting or changing things, it must be worth while and effective in the long run, as well as successful.

Creating a system of growth that is working towards equality, access to resources and helping the environment for the long-term.

development that meets the needs of the present without compromising the ability of future generations to meet their own needs.

Improving and expanding in a way that is maintainable

Doing things in a careful way so that it will continue without hurting the environment

I am not sure.

Sustainable being satisfying the needs of the present without hindering the ability of the future to satisfy their needs. Development meaning growth. So growing in a way that satisfies the present and doesn't harm the future.

that something or the person is still improving and developing over a longer period of time

Things can be reused.

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

---

sustaining the present environment without compromising the future for others

---

The normal development of human activity, that can be carried on long-term without damaging impacts. Unfortunately, this largely is non-existent, because industries are dominated by a handful of global monopolies. A classic example is farming - in the UK, we till the soil way too much and cause the disruption of the natural biology, spray deadly poisons that cause cancer, alzheimer's and genital deformities to get rid of weeds, and then fertilise with factory-produced chemical fertilisers, missing the broad range of necessary micronutrients which would come from animal manure or seaweed sources. Then someone in the food industry wants to make more money so they promote veganism/plant-based diets - one of the most environmentally damaging diets which "requires" more tillage, more land for foods long considered unfit for human consumption i.e. soya, or insane amounts of water i.e. avocados, and the diet does not provide everything the human body requires.

---

Sustainable development is development that preserves resources for upcoming generations with fulfillments the needs of present generations.

---

development that is able to be maintained without impact on the world around it

---

Progress that can be maintained over a long period of time with no potential barriers or issues preventing it.

---

To be able to develop in the current time without affecting the sustainability further down the timeline.

---

A way of developing without causing strain on resources and the environment

---

options in development that are beneficial to the environment as well at the cause

---

self-sufficient development plans like homes that run on renewable energies and give back greener energy to the grid or community

---

Developments that can be continued/carried out with little to no harm to the environment. These developments will improve upon the current or existing situations that they are being applied to, environmentally, socially, etc.

---

Understanding and motivation to change for better to help become more sufficient

---

To advance without overusing the worlds resources

---

Meeting the needs of today's generation without compromising the needs of the future generations

---

Allowing the current generation to thrive and develop without impairing the resources available to the next generation

---

Not taking more than you need to progress.

---

Sustainable development is being able to meet development needs in a safe and controlled way that takes into consideration natural and environmental factors of development

---

Developing the world in a sustainable way

---

Developing without affecting the future from developing and being ethical and reasonable

---

development which can keep itself ggrowing without harming the environment for future generations

---

Need of change

---

Development that's good for the environment

---

Developing our society without damaging the opportunities for society to develop in the future

---

To develop sustainable in a postive way, be more effective with the environment

---

Developing skills that help us live more sustainably, providing future generations with a planet to live on.

---

Using the resources available to develop pre-existing and future aspects of the environment and society without having a negative impact on future generations. For example, creating more green spaces and environmentally friendly buildings.

---

What do you understand the term 'sustainable development' to mean?

***Please write your answer into the box below***

---

Development of ideas to progress humanity without disregarding current affairs

---

Environmental Development that doesn't deplete our natural supplies or damage thr environment

---

Developing in a positive way that doesn't affect future generations

---

Creating something which has a police contribution to the environment and which can continue indefinitely

---

Benefits the environment

---

Long term development

---

Growing the modern world into a more sustainable one that has a better future.

---

Development which meets the needs of the present population without limiting future generations ability to meet their needs

---

Being able to move forwards in building/ developing our world but in a way that does not cause negative impacts on the earth

---

Development that aims to solve current issues without compromising the future of the environment/a business etc. Long-term consideration for processes and how this will have an impact.

---

Behaving in a way in which takes the long term implications of your actions into account, whether they will impact the environment or other communicates and how they will impact them. Minimising any of these impacts which might be negative when making decisions.

---

Develop/evolve whilst respect the environment and our surroundings, and not compromising future needs when acting on the present

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

***Please select one for each statement***

**(Sustainable development is something which places of study/apprenticeships should actively incorporate and promote )**

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

***Please select one for each statement***

**(Sustainable development is something which all courses / apprenticeships should actively incorporate and promote )**

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

***Please select one for each statement***

**(Sustainable development is something all tutors / teachers / trainers should be required to incorporate within their teaching )**

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

**Please select one for each statement**

**(Sustainable development is something which I would like to learn more about )**

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

---

to help the environment

---

It'll make a huge difference in the future

---

Because its clearly very important

---

to ensure that the current generation does not put nature or future generations at a deficit

---

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

as I don't know much and am a bit naive to the current seriousness of the situation

How we can keep the environment safe and keep it up long term

make me make better choices to decrease the negative impact I have on the world

Because if I'm working for a degree to get a job in the future I need there to be a future to live in

I study Geography so I'm interested in the future of sustainability, and would enjoy a career exploring sustainability

Because I want to educate myself more about the little things I can do in my day to day life that would make a difference!

I don't know enough to be well informed and know that I can make a big difference.

I'm very keen in environmental issues, and one of my options is to work as a teacher so it would be very interesting.

In order to do the best I can for the environment, this can't happen without some education around why you should do better and how.

To find ways in which the younger generation can progress without causing damage to their future selves.

It is something that is important to incorporate into professional practice. Being able to implement this across sectors would be of great benefit.

To help the environment

Because I haven't been particularly great at understanding how I can make a sustainable future for my children and their families and now I am seeing the effects of climate change and sadly I am realising how silly I was. I would like to start to make changes now but could do with more information on what to do.

More effective long term

I believe that if there are ways that we can develop without negatively affecting people in the future then we should be incorporating these things into our daily lives.

How it can be incorporated into day to day life

I would like to play a part in helping reduce the problem of climate change.

To gain better understanding of the actions I could take within future employment to help protect the environment for future generations

For our future

because it's the kind of development which coming generations needs.

To be more aware of things we can change now to make this planet a better place to live for next generation.

I would like to educate myself more on how sustainable development can help the particular job role and industry I wish to enter, giving me the knowledge to make real change however big or small.

I believe it is essential for all professions to understand and take into consideration of our careers.

understand how I can use it in everyday life and my future career

it's hard really as I can't apply this to my future career as a nurse and use of PPE would like to see changes in place

I would like to know how I can make more of a conscious effort to be more sustainable in my daily life and activities.

for the health and happiness of mine and newer generations

Sustainable health care development

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

I would like to learn more because I would never want to selfishly meet my needs and then end up ruining the world for future generations to come

Learning more about how I as an individual can be more sustainable, so I can promote this in my career as well as day to day life.

what is being done currently and the processes that can be used

Because I am an ambitious kind of person and i want to know how all things develop and grow.

To help and play my part

I think it is incredibly important that we are all educated on sustainable development, as it makes a future for our planet possible. As I am going to be a primary school teacher, I think it is especially important that I am appropriately educated on the subject, so that I may teach our children about it, and they can make a difference where our generation has perhaps not been able to.

how to maintain a healthy and compromisable way to be sustainable

In accounting making sure sustainability is integrated is vital in the modern day and age, therefore I would greatly appreciate to know more about it in order to facilitate this change in accounting

In order to understand it more.

Because everyone has a responsibility to educate themselves about matters that will effect our future

It will become a bigger and bigger issue into the future.

I would like to contribute towards a more sustainable planet for the future benefit of everyone

Because I feel if we all knew more the problem would be less prevalent

To increase my understanding

Because the world is changing and we should learn to change with it to save our natural resources

Because if myself and others do not learn about this, how can we ensure the safety of our planet and therefore the protection of our future generations. Also, because the animals suffering possible extinction have done nothing wrong and do not deserve what is happening, we owe it to them to help them now.

Because it will help to build and save future generations

To give more to the society and encironment

It's important for the future

It is important for futute generations

So I can ensure that I am doing what I can to help.

If it can help create a better world for my children to grow up in then that is more than a good enough reason.

I'm extremely interested in both environmental and social change both as a person generally and politically.

I would like to earn more about sustainable development within my studies, as I want to be a teacher I BELIVE IT WOULD HELP ME TO EDUCATE MY students on the importance of it now but also within future development and allow human kind to evolve.

To get full information from the relevant people rather than politicians

To enable me make a meaningful and lasting impact in the society

This is because is an individual you need to be self aware of the effect you have on your environment and people surrounding you. Having knowledge of ways you you can change yourself individually to be sustainably developing will benefit yourself and assist you to help others to develop in this way

To create a better world to live in

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

To impact on my future profession as a teacher. So I can teach the children

To protect ourselves and next generations

How to save the planet.. literally anyway I could actually make a difference

to create more awareness

To learn to develop without affecting the natural resources for the future generation.

because it is the way forward

Understanding specifically why something is important and how individuals can help is far more constructive than simply saying "climate change bad" or "meat bad" - you need to make people interested and invested.

Because it is essential to provide a better world to my child in the future.

im interested in making personal changes to help limit my negative impact on the environment

How I can include it more in my future career and time at my university independently and effectively.

I intend to work in the nutrition field where it is essential to have good background in sustainability for education and also maintaining a low carbon footprint. The position I will be in is an important contributor to environmental awareness.

How can we make this change now

it is a valuable factor to develop

The concept now applies globally

because it is one of my chosen modules and it relates to my studies

I would like to learn more about sustainable development because it helps to preserve the resources for upcoming days without any crisis. And also teach us to preserve nature and utilize it.

To ensure that there is still a liveable world as I grow older

It is important to ensure the future is in safe hands and there is a long term vision to aspire for.

We can't afford to develop as a nation at the rate we are without taking responsibility for our own actions, we need to be sustainable in order for this planet to survive. The answer isn't to stop developing, but to develop in such a way that we don't compromise our futures.

Our actions affect the environment and future generations. It is unfair that they might suffer or not be able to experience things previous generations have because of our actions. I want to learn how we can help.

so that i can start applying it to my everyday ideas and future prospects

To further my knowledge and understanding in order to be more sustainable and supportive of the cause

To be able to make a difference in the future

I want to help contribute to bettering the world

There needs to be a greater focus on sustainability to help ease the environmental issues that we face. I would like to know more in order to educate my children so that they can make an impact.

As a student, studying to be a future individual in the workplace, it is important for me to be able to know what it is that I can do now that will save and help the environment that I will need to work in later.

I want to best educate the future generations

To be a part of helping the community develop and do it in a safe way

Because I don't know that much about it and am interested to learn more

I want to learn skills about sustainability that are relevant in my field.

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

To be able to pass on knowledge and educate children in the future in my career as a primary school teacher

to build a better future

To encourage this in society in the future myself

So I can educate the children I'll eventually teach

Because I would like to know all that I can do to support it as an individual.

It is a massively important concept

To gain a better understanding of how to make these changes

It is an issue that is very relevant in the current climate. Change must happen and I would like to be an active part of that

I think that in order to make true sustainable changes for the future generations and the planet, big corporations need to be pushed to make these changes. It's important for future businesses workers and future managers, leaders, etc. of these big corporations to understand you can still run a profitable business while improving sustainability practises and behaving more ethically.

Enables future generations to live a better life, as well as helping our own selves respect nature and preserve the environment. It would give us alternatives to a better living and long lasting experience.

Do you have any suggestions on what actions you would like to see your place of study / apprenticeship take to improve its performance on sustainable development?

**Please write your answer in the box below**

na

If I get an opportunity, I would conduct a 4-days workshop for different Master and undergraduate level course. Where I would teach sustainable development in a fun way with self-realization through yoga. If I get proper support of finance I would like to conduct easy to learn yoga, breathing technique, and meditation to bring everyone to an acceptance mindset where they become life sensitive then with it I can teach them sustainable development. Eg, day 1 of workshop, 15 min deep breathing relaxation techniques with 10 minutes meditation and a class of "organic farming benefits and practical approach" for 35 minutes.

no

Necessary lectures to attend, posters about it around the institution

Not that I can think of.

None

N/A

Less waste and less hand outs for lectures unless a hard copy is necessary. A lot of people from my course travel far for lectures, so the option for online learning where appropriate may be more beneficial to prevent travel emissions.

Don't know

Go Experteering on Vacation,

no

Maybe organise talks with specialist to come in that people can attend to learn more and from that set up strategies.

Do you have any suggestions on what actions you would like to see your place of study / apprenticeship take to improve its performance on sustainable development?

**Please write your answer in the box below**

I am on a teacher training course so I would like to know how to teach sustainability in the classroom

Support green & protest actions. Tackle its own environmental impact

n/a

Don't know

perhaps a group

none

optional courses for people to take to learn about it

more awareness

More signs around campus which give us more of an insight into the difference we can all make

N/A

Tell us about what they're doing so we are well informed.

No

N/a

Post more activities to learn about it all on social media.

more information about how to recycle products

N/A

Have more of a discussion about it

Include aspects of sustainable development where appropriate. For example, in modules where it is most relevant.

N/A

More bins and signs around campus

there is lack group activity so we can improve this.

More events where, in a fun way, students could express their opinions regarding sustainable developments and how they are trying to be better for our planet

Integrate different modules and elements of the seminars that focus on sustainable development and not just teach but educate the next generations on what needs to be done.

Voluntary sessions outside our learning ours to develop in, as unfortunately, not everyone has the same interest as me.

Advertisements around campuses or places of study that promote easy ways to get involved and incorporate ways of being sustainable.

my institution is already quite good

I would like to see workshops put in place to educate themselves better and also to educate students better, so that the information about it can be spread to the generation now and passed down, so that everyone understands

Hold events open to students and the public in addressing and acting upon sustainable development goals.

Awareness Day

Promote it

no

incorporation into the course

Do you have any suggestions on what actions you would like to see your place of study / apprenticeship take to improve its performance on sustainable development?

**Please write your answer in the box below**

I think volunteering options are most important as people can become more involved whilst also developing their CV and learning new skills.

No. I enjoyed my sessions and our tutors learning us properly.

Emphasis/incentives on bringing own drinks containers into cafe areas.

I think they are doing a great job on teaching us about sustainable development, and the goals that make this possible. The only suggestion I have is incorporating it into our taught sessions more.

No

not too sure

None

Linking sustainability development in with studies and their correlations to connected careers from the subject.

energy efficient halls of residence

Energy saving measures like sensor operated lighting and solar panels on the roofs. More support for sustainable transport, such as bigger/more storage for bicycles. Better facilities for online learning to allow more lectures to take place remotely and avoid travel and use of central facilities altogether.

go back to online learning when a lecture doesn't specifically require in person teaching. this will lower carbon emissions from students travelling for the sake of 2 hours teaching. Also, encourage and educate people to be environmentally friendly at home, eg eco washing cycles, heating & lighting, recycling. from experience, students are clueless.

We already have recycling bins separated from the regular bins so I can't really think of any more than that.

Stop providing bottles of water to event ambassadors who work on Open days and graduation days. We have water fountains, so should encourage everyone to bring their own refillable bottles.

Maybe offer a leaflet/online course on the subject and make it compulsory to take/read

They should try and help people that are struggling financially like me the money advice in my university need to do more to prove solution and help us make sure our complain is solved like me my problem is not solve yet thank you

turn electricity and lights off when not in use solar panels the roof is big enough

N/A

My place of study should determine sustainability strategy by been in line with the country setup goals/objectives. Equip us the learners with the knowledge and tools to deliver on sustainability strategy and work with the tutors to make sure is implemented

No

maybe

no

Maybe have a set team as part of the student union to encourage change around campus on staff but also influence students, therefore being more impactful.

To have a short mandatory module on the topic to make people aware

They should see more to the welfare of their international students.

When building new buildings on campus state how they will help students in future years and what impact they will have on the environment and how they are going to control the negative effects such as Co2 emissions

Do you have any suggestions on what actions you would like to see your place of study / apprenticeship take to improve its performance on sustainable development?

**Please write your answer in the box below**

No

How we can instil this into the age and curriculum of the children we are teaching

No idea

i havent done enough research to make such suggestion

Integrating the subjects with sustainable development methods.

no

Public transport (not locally, but within the school) options rather than independent transport. More ethical stationary etc. Encouragement for students to purchase more sustainable stationary products.

no

I can't think of any right now (that has not already been mentioned).

Providing access to foods that require less plastic packaging (i.e. investing in inventory that is not plastic or at least 100% recyclable) in the student shops.

there should be a webiste for students to seel thier books to one another. it would help sooo much

Show how much/little actions of one living sustainably impact global issues. Also highlight the biggest obstacles to sustainable development and possible solutions.

protect environment

no, my place of study has great performance in terms of sustainability

teach accurate and evidence-based research. don't fall for global marketing campaigns. do their own research into the natural environment and how animals, plants, and the soil biology work together. stop demonising meat, dairy, and fish - which provide optimum and dense nutrition including many micronutrients which are omitted in veggie and vegan diets, as well as when farmed correctly, providing natural fertilisation and low levels of surface tillage to the land, thus optimising the biological processes in the subsoil layers.

Not handing out packs at the beginning of a course - noone needs another canvas bag or highlighter. Each campus/ place of study having an environmental audit or overhaul

Encouraging sustainable living for students, making this more sustainable, e.g. refill stations for home staples like rice and pasta. Renewable energy would be another way forward, there are ways of improving sustainability, university's need to lead in the hope students will follow

As an art student, I would like the art department to think more about how the resources we use could affect the environment and how we could supply more environmentally friendly materials.

Look at investing in a park and ride scheme- so less carbon is used by commuters

Solar panels on the buildings, green energy suppliers and a garden to grow fruit and veg.

I would like to see a more publicity on the issue and a greater sense of urgency for this matter

More paper packaging

Using less cupboard coffee and tea takeaway cups, and less PPE, as it's plastic

Incorporating sustainability into all modules/degrees, regardles of the subject (e.g. business, marketing, education ect, not just the science degrees).

disability sport placements to get some real life experiences

Worked into the content and how your course and jobs effect this

Possibly offering food wastage bins instead of just landfill and recycling

Be more vocal about it

Do you have any suggestions on what actions you would like to see your place of study / apprenticeship take to improve its performance on sustainable development?

**Please write your answer in the box below**

---

incorporate it into the curriculum more, require it to be linked to assignments.

---

My place of study already offers a lot of modules and subtopics within modules based on sustainability, I've also been to a sustainability workshop with one of my modules, but making that more of a regular thing across more modules so more students have the chance to go to sustainability workshops could be beneficial

---

Promote recycling and waste/water/light/electricity minimisation in accommodations and around sight. Carbon footprint and transport modes.

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

---

allowed me to explore them further

---

Its gained a valuable understanding

---

I recycle always if it is possible to do so

---

Always have walked everywhere, chose where i lived so I could exist without car

---

n/a

---

I feel I have learned more about these things in my own time.

---

made me aware of what is happening/has happened in the world

---

Its developed my understanding of the world

---

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

changes opinions and views on things. Opens doors for future careers/areas of interest

It's taught me a lot about ways of living and the rights we all have. Also about how we can look after ourselves as well as others and our planet.

Some aspects of life I havv tried to be more eco friendly like using natural deodrant etc.

Without knowing the real issues in the world it's difficult to know what is happening and how we can make a difference.

Allowed me to make informed decisions

It made me aware since I was a kid, so it has always been present in my life.

N/a

It made me more aware of the impact my actions can have on others. Knowing this impact it has led to me reflecting on my actions and promoting change for others.

I try and make sure all I do is better for the environment. I only use reusable bags made from recycled plastic, try to eat locally sourced food ect

Learning about most of it in secondary I had motivation to change and help the environment and then i personally felt defeated learning that there was not much I could do since we are so set in our ways that no matter what my generation does we cant change the end result.

It has helped me in certain aspects of my career.

Changed my perspective to a positive one. More consideration and understanding needed.

The learning has impacted my ability to review the context/circumstances of the situation under discussion and apply to each facet of my life, home, education, employment etc. I currently work for a charity and therefore when we are considering strategic change, implementing new initiatives etc we are always looking at the context, whether it be environmental, political, cultural etc

Learning about climate change and the effect that my personal lifestyle can have on the world and future generations was eye opening. I now ensure that I walk whenever possible instead of using my car, I also recycle and use as little plastics as possible.

Gives me a greater understanding and what I should and should not to to play my part to help.

I try to keep up to date about major events in the areas that are interesting or pressing to me.

Allowed me to grow as a person and become more socially aware of the difficulties individuals and groups face and to understand how nobody is different and deserves equality

I have learnt more about people

It helped me understand better issues the world and its population is facing.

It has allowed me to always have the thought process of how change can occur and focus on the bigger picture when completing assignments and assessments. It has given me even the basic knowledge of the current state of the world and what needs to be done in order to real change.

N/A

it certainly has changed my footprint in personal life but as a carer and nursing student have not been able to limit my use of plastic

Learning more about social justice and health and wellbeing has elevated my values and learning within my degree and has impacted my aims to pursue these areas in my future career.

I am very motivated by social justice issues, creating equality and equity for marginalised people is extremely important to me but I don't think this is because of my education. However, one of my teachers on my access course really inspired me to continue the fight.

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

Learning about these issues has motivated me to become a better person and to want to help the environment and to help and understand people better to prevent anyone from being treated unfairly due to things they cannot control.

Learning about cultural diversity has allowed me to view things with more of an open-mind in my day to day life.

Awareness of how everyone can make a difference by adapting ways we live. If everyone does a little bit to make a big difference for the future of our planet

I know about society

I just feel like that these issues listed above are the fundamentals for an educated person. It does not matter which course you study, the awareness is a key.

it has made me think about what i do and how it can affect other as well as how my waste contributes to global issues

Learning about different cultures and the global population opened my eyes to what people experience that is so different to my own experiences.

Yes its develop my mindset. I learning new things as well.

Supporting sustainable goals, speaking up about recycling and waste in previous company.

Being educated on these issues made me realise how important it is that everybody is aware of these. This has inspired me to include these where I can in my own teaching, so that young children are aware of their rights, as well as important issues in the world currently and ways they can help our planet.

Ensures the consideration of environmentally friendly approaches to waste reduction.

it has given me a more open view on the world and to be subjective to others opinions and thoughts

I have made it my responsibility to recycle as much as possible and waste as little as possible. I use charity shops to avoid consumerism and learn more about the environment eg through the current CP026

They have made me more aware of issues in the world surrounding me.

It allowed me have a greater understanding on real world situations and what has caused them/ the decision making skills behind them

I try to act with respect for the environment. I value the environment and try to do what I can within my means (time and financial).

shown me the wider picture. from self learning I am aware of how little the individual is compared to the impacts from big corps

I vividly remember learning about climate change made me really sad.

I have always tried not to be wasteful, but my awareness of environmental issues has made me even more determined not to be wasteful, be resourceful and encourage others to do the same. I have stopped using chemicals on my garden and now clean with vinegar and lemon.

It has made me think about how actions affect others

awareness

n/a

The learning of the above has really exposed me to the the knowledge of the environmental factors that is affecting us and some solution to it

None

it changes the way i plan for the future

widened my knowledge on a range of topics

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

---

It made me approach life with a different point of view.

---

I've always had an interest in ecosystems and nature, but learning about sustainability and global warming in primary school specifically has really ignited that interest and passion even more. I can still (10 years later) remember the exact lesson and project we had at primary school that made me look into what we can do to help the planet. I am also very invested in social justice and equality - an interest that began in a history class in year seven in high school when looking at the slave trade.

---

Learning about this tuff has made me more considerate for my actions and the impact it has on the world around, but most importantly the environment. The opportunities I have been given also make me think about how millions of people don't get the same opportunities and may be less aware about the world around them and where we come from, I think knowing where you come from is an important aspect of who you are and influences your decisions throughout life.

---

Made me more aware of potential problems that may occur in the future

---

It has made me become a better citizen

---

I feel that learning about climate change from a young age allows you to be aware that your actions have a bigger impact on this earth than you realise. You begin to consciously make changes in your daily activities such as choosing to walk as it's better for you and the planet or not using a reusable coffee cup instead of getting a 1 use one. Through learning about equality and ethics it made me realise I want to be an individual the actively you holds those rights and influenced me in choosing to do my nursing degree

---

It has allowed me to understand the importance of diversity and discrimination

---

Thinking of the bigger picture, How to be a good citizen. To be a good role model and teach future generations

---

Very minimal, I feel like that lack of learning these things has had a bigger impact. Being thrust into the world under the impression that the future is being looked after and that business are well meaning and without any real skills for looking after our own physical or mental health is a real problem.

---

positive impact, i have learn to respect people and social changes can only come, when we understand different perspective and approach, i also participated in various environmental ethical goal yearly.

---

i am now vegan and buy sustainable fashion

---

I'm very aware of most of the issues we face as a society.

---

It has had an impact on my thought processes when using energy in my home, and whenever I see or read information on the news concerning climate change and how we can adapt our ways of living to help.

---

Learning about sustainability through my previous jobs made me aware of how much waste I was creating as an individual, and I have slowly found zero-waste essentials over the last few years to cut down on how much waste I create.

---

No impact

---

Racism and Brexit

---

I gained a lot of information to make myslef aware of the things I should be doing for a better future

---

It impacts how I use water as I now try to minimise unnecessary consumption and also attempt to recycle plastics.

---

I gained valuable knowledge which explains the importance of these matters.

---

I am disappointed that people are so gullible and still believe the nonsense we see about climate change and plant-based diets in the news. There is a gross lack of knowledge that makes me sad to see - people do not do their own research and look into a few basic facts

---

Awareness of bigger issues and a drive to learn more

---

It has made me become more aware to the issues we must tackle on a daily basis.

---

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

I feel well educated overall and many of things I've been taught have influenced my decision making and made me who I am today.

The environmental issues have made me change what I use and if it can be reused. Ethical issues and considerations will help my future career.

makes me think more deeply into issues instead of just looking at how it is presented to me

Wanted to become more inclusive of everyone and be more eco friendly

More recycling, changes in products bought, paying more attention to what is going on in the news, discussions of morals/impact.

-

I think it makes me a more well rounded person who is more conscious about the importance of these things

To see myself and my actions as having a wide spread impact.

It has made me a more informed and educated individual which allows me to share this knowledge with others

I turn the lights off at home

Learning to make better choices.

I have become very fascinated with geography and being able to pass on knowledge to future generations it's made me a more rounded person and refined what I want to do in the future

To think more about how I can take care of the environment.

It has encouraged me to be conscious of my environmental impact

It had made me reevaluate what's important in life as well as making me feel more close to the world and nature.

Most was learnt in secondary education and was brushed past. The majority of what I know on these topics is from personal research. But still the learning has changed the way I value nature and changed my lifestyle

I try to make an active effort in my life to be as environmentally-conscious as possible. It has shaped by education in the topic of my dissertation and the subject of the Master's i want to study.

Since going to university I have had a lot more understanding on sustainability in particular, and the impact that businesses have on the environment and future generations, and what businesses can do to make their products, services and the way they operate more sustainable. It's taught me businesses don't have to sacrifice profits in order to be sustainable and big corporations are the main contributors to unsustainable practises. I want to work for a company that behaves in an ethical way while still making employees feel valued. Businesses need to behave in ways that demonstrate their corporate social responsibility without using it as a "benefit" of working there and an excuse to therefore pay their workers less, as it should be standard practises across all businesses. In the future if I ever run my own business, I would like to run a company focused on creating sustainable products or services.

Changed perspective on things for the better and taught me how to live more sustainably

Still thinking about your experiences in education so far, what place where you have studied...
